

Sign up, risk-free with the morEnergy AVERAGE DOWN Program

Trying to anticipate the future price of energy is never easy, even for the professionals. As a homeowner or business trying to time the market to maximize your savings can be costly if you fail. This is why morEnergy has designed the AVERAGE DOWN Program. The program allows you to lock in now, and if you find that the price of energy has gone down you can simply call us (subject to certain terms and conditions set out in your contract) and request an adjustment. Imagine if you could do that with your Stock Broker! We took out all the risk. What are you waiting for? Sign up today!

GO GREEN by reducing your net climate impact

There's a lot of discussion nowadays about what steps are required to avert serious climate change in the future. The reality is that we all contribute to the release of carbon emissions by burning fossil fuels such as coal, natural gas or oil to heat and light our home or business. The practical steps we all take to reduce our energy usage, to use alternate energy sources, or to recycle **do** contribute to a cleaner, more energy-efficient World. But until now there was no way for us to truly measure our contribution.

Now there is a common, international currency that makes it easy to give a value to the cost of removing pollution from the environment. It's called a Carbon Offset Credit. A Carbon Offset is a certificate representing a reduction of one metric tonne of carbon emissions. Now you can purchase Carbon Offsets, for just pennies a day, to mitigate, or compensate for, the CO₂ emissions you create through daily energy usage.

morEnergy Savings offers you the ability to purchase Carbon Offsets **directly on your energy bill**, through CARBNFOOT, a Green Investment Company with a growing portfolio of high-quality Energy Efficiency and Renewable Energy projects that have been registered by The Gold Standard to reduce CO₂ emissions. CARBNFOOT manages funds in the construction industry for Green Build projects and is trusted as a verified avenue for investing in clean energy technology.

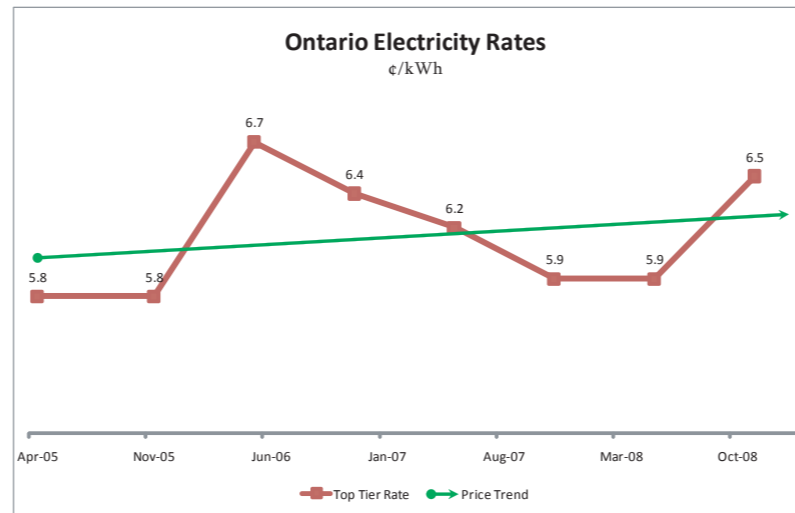

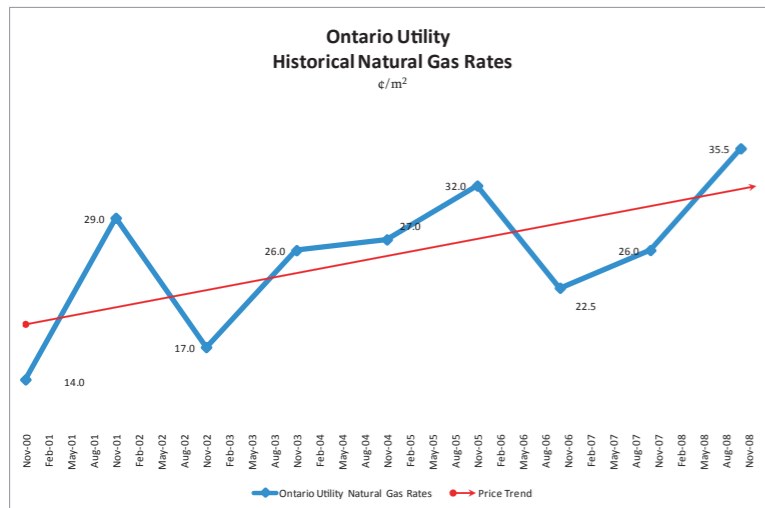

Every Carbon Offset you purchase relates to a specific amount of carbon reduction achieved through a CARBNFOOT project. You can be sure that for every offset you purchase, a tonne has actually been reduced. To date, the CARBNFOOT portfolio of projects have produced Verified Emission Reductions (VERs) equivalent to thousands of tonnes of CO₂ a year, compared to typical coal-fired plants.

Sign up voluntarily today on your gas and/or electricity application, and we will offset between 20 and 100% of the emissions produced by your household consumption. Purchasing Carbon Offset Credits is the best way you can gift the planet by legitimately reducing carbon emissions. It's quick, it's simple, and it can cost just pennies a day, depending on your level of commitment.

5 Year Protected Rates on Natural Gas and Electricity Bundled Pricing on All Your Home Comfort Needs All from a Trusted Ontario Energy Solutions Provider

Our quality of life depends on a safe, clean, reliable and affordable supply of energy. However, tremendous growth in Ontario's economy and population in the coming years will mean increased demand for power. International energy outlook groups forecast that Canada's total natural gas consumption is projected to increase steadily, at a rate of 1.5 percent per year. This growth in domestic consumption, coupled with a projected decline in production will cause natural gas prices to continue to climb.

With rate increases affecting every household, it makes sense to do your homework and choose an energy provider you can trust for the best long-term value. When you choose a protected rate natural gas or electricity program from morEnergy Savings for your home or small business, you are locking into peace of mind that your rates will not change. You will receive a reliable, constant gas and/or electricity supply through our trusted direct purchase partnerships at a competitive fixed rate.

And according to forecasts, the Province's ability to generate electricity will not keep pace with rising demand. We will be faced with refurbishing or replacing many aging power plants that currently exist, and to pursue energy conservation initiatives that include the development of new, renewable sources of energy. Your choice to automatically purchase natural gas and electricity at current rates will leave you vulnerable to an ever-shifting energy budget.

There are no adjustment costs or administrative fees to switch your enrollment over to us. Simply sign up with morEnergy Savings and your new fixed price will appear directly on the energy bill you currently receive from your utility. Your utility will continue to provide you with 24-hour emergency services. There are no adjustment costs or administrative fees to switch your energy purchases over to us.
